

Goodman Fielder is one of Australia's leading food companies that specialize in producing various varieties of bread.

A critical application within the bakery industry is oiling the bread pans before the dough is deposited. This is to ensure that the loaves will release from the pans when they come out of the oven. The issues associated with the previous system used included overspray, excessive misting and poor coverage of the pans.

Spraying Systems Co.® Australia delivered and commissioned their AutoJet® Bread Pan Oiling System to several Goodman Fielder sites across Australia in late 2013. With the new AutoJet Bread Pan Oiling System, we were able to achieve a much higher percentage release of loaves from our pans while also reducing our oil usage. Additionally, the following benefits were also realised:

- Improved spray coverage, reliability and repeatability
- Negligible oil mist in the air
- Reduced overspray on the pans and equipment
- Minimal need for operators to make adjustments
- Simplified the maintenance requirements

The AutoJet Bread Pan Oiling System has been a worthwhile investment and is a vital part of our baking operations.

Yours faithfully,

Atul Sud
National Engineer
